

HEARING PROTECTION

Permanent hearing loss can result from extended exposure to unsafe levels of sound. This type of hearing loss is irreversible and cannot be corrected with hearing aids or other equipment. In addition to temporary or permanent hearing loss, loud noises can also create physical and psychological stress and interfere with productivity and communication. To protect from these types of hearing risks, adequate hearing protection should be used.

Time Exposed to Sound Level

When is a Hearing Protection Device Required?

Action Level

For exposure to sound levels greater than 85 dB, a Hearing Protection Device is required
